# Lattice Panel

Making a lattice panel is a great way to add some pizzazz to a project. *Woodsmith* No. 235 features a serving tray with a panel design based on a traditional Japanese *kumiko* pattern.

To change up the look, you may want to consider the pattern shown here. This one is also based on a Japanese pattern. The big difference is the number of short strips you'll need: 32.

They're spaced evenly along the length of the panel, as shown in the drawing below. Keep in mind that the outer strips are flipped to come in from below (top view drawing below). **W**
